

Python Programming - 2301CS404

Lab - 13

Roll No.: 315

Name: vishva M. Bhimani

01) WAP to create Calculator module which defines functions like add, sub,mul and div.

Create another .py file that uses the functions available in Calculator module.

```
In [2]: import calculator
a=int(input("enter no 1"))
b=int(input("enter no 2"))
print("addition=",calculator.add(a,b))
print("sub=",calculator.sub(a,b))
print("mul=",calculator.mul(a,b))
print("div=",calculator.div(a,b))
```

```
addition= 5
sub= -1
mul= 6
div= 0.6666666666666666
```

02) WAP to pick a random character from a given String.

```
In [3]: s=input("enter string")
import random
num=random.randint(0,len(s)-1)
print(s[num])
```

C

03) WAP to pick a random element from a given list.

```
In [5]: a=list(range(1,11))
import random
num=random.randint(0,len(a)-1)
print(a[num])
```

6

04) WAP to roll a dice in such a way that every time you get the same number.

```
In [8]: import random
random.seed(10)
print(random.randint(1,6))
```

5

05) WAP to generate 3 random integers between 100 and 999 which is divisible by 5.

```
In [13]: import random
# a=random.randrange(100,999,5)
l=list(range(100,999,5))
print(random.sample(l,k=3))
```

[835, 115, 360]

06) WAP to generate 100 random lottery tickets and pick two lucky tickets from it and announce them as Winner and Runner up respectively.

```
In [14]: import random
l=list(range(1,101))
output=random.sample(l,k=2)
print("winner:",output[0])
print("runner up:",output[1])
```

winner: 60
runner up: 63

07) WAP to print current date and time in Python.

```
In [15]: import datetime
print(datetime.datetime.now())
```

2026-03-02 12:47:44.430879

08) Subtract a week (7 days) from a given date in Python.

```
In [18]: import datetime
date=datetime.date(2026,1,9)
new=date-datetime.timedelta(days=7)
print(new)
```

2026-01-02

09) WAP to Calculate number of days between two given dates.

```
In [19]: d1=datetime.date(2026,1,9)
d2=datetime.date(2026,1,18)
ans=d2-d1
print(ans)
```

9 days, 0:00:00

10) WAP to Find the day of the week of a given date.(i.e. wether it is sunday/monday/tuesday/etc.)

```
In [21]: d1=datetime.datetime.now()
print(d1.strftime("%A"))
```

Monday

```
In [ ]:
```
